Services Offering

We provide services in the following major areas:

Enterprise Application Integration & Development on various technology and platforms;

Application Quality Assurance;

Performance Analysis and System Tuning;

Application Maintenance and Support;

Project Management and Project Control; and

Hardware maintenance and technical support services.

Enterprise Application Integration (EAI)

As new applications are introduced, new application in most cases will have to work with existing application systems. Working with the latest in middle-ware technology, CBI's EAI services allow new and old applications to work seamlessly together to deliver the intended benefits to the customer.

CBI's extensive network of technical specialists enables CBI to handle complex integration projects. Sample of successfully completed projects:

Integrated MVS Cobol application with

Microsoft SQL Server using Sterling Commerce for billing purpose;

Integrated CICS/DB2 application with IBM LDAP Server and WebSphere Application Server using MQ-Series for CRM purpose;

Integrated SAP with WebSphere using MQ-Series for order processing via EDI interface;

Integrated CICS/DB2 application with OS/2 Presentation Manager GUI using MQ-Series for CRM purpose;

Integrated SAP with DM plus using Mercator for inventory control;

Enterprise Application Development

CBI provides resources for the entire application development cycle from user requirement to implementation / deployment.

CBI has extensive application development experience in many platforms including the following:

Java/J2EE

Microsoft

Mobile platforms
